

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

Claims 1-10 (canceled).

Claim 11 (new): A roll type transdermal patch roll comprising;
a dispenser core, said dispenser core having a pair of edges;
a tape patch wound around the dispenser core, the tape type patch comprising a
tape type support, an adhesive layer laminated on all over one side surface of the tape type
support, a plurality of tear off cutting lines formed in the tape type support along a
direction crossing a longitudinal direction of the tape type patch, and having a pair of side
edges; and
a pair of side covers attached to both edges of said dispenser core and covering
both edge sides of the wound tape type patch,
the tear off cutting lines being located positions which the adhesive layer exist in a
direction perpendicular to the one side surface of the tape type support

Claim 12 (new): A roll type transdermal patch according to claim 11, wherein
each of the side covers is formed of polyacrylonitrile resin or polyethylene terephthalate
resin, and

the dispenser core is formed of one selected from the group consisting of
polyethylene terephthalate resin, polyacrylonitrile resin., high-density polyethylene resin
and polypropylene resin.

Claim 13 (new): The roll type transdermal patch according to claim 11, wherein
each of the side covers is formed from polyacrylonitrile resin, and the dispenser core is
formed from polyethylene terephthalate resin or polyacrylonitrile resin.

Appl. No. 10/049,162
Amdt. dated December 16, 2003
Reply to Office Action of September 16, 2003

Claim 14 (new): The roll type transdermal patch according to claim 11, wherein the tape type patch comprising a covering layer laminated on one side of the adhesive layer which faces to the other side of the adhesive layer to which the tape type support contacts, through the adhesive layer, in a releasable manner from the adhesive layer.

Claim 15 (new): The roll type transdermal patch according to claim 11, wherein the covering layer is made of polyethylene terephthalate resin. 14

Claim 16 (new): The roll type transdermal patch according to claim 11, wherein the tape type support is a knitted fabric, woven fabric or non-woven fabric composed of stretchable polyethylene terephthalate resin or polybutylene terephthalate resin.

Claim 17 (new): The roll type transdermal patch according to claim 14, wherein the tear off cutting lines consist of perforation slits, with a slit width of 1.0 - 2.0 mm and a slit spacing of 1.0 - 1.5 mm, and the breaking strength when the external patch is torn off at the slits is 7.36 - 15.24 kgf/48 mm width.

Claim 18 (new): The roll type transdermal patch according to claim 11, wherein the tear off cutting lines consist of perforation slits, with a slit width of 1.0 - 2.0 mm and a slit spacing of 1.0 - 1.5 mm, and the breaking strength when the external patch is torn off at the slits is 0.76 - 2.65 kgf/48 mm.

Claim 19 (new): The roll type transdermal patch according to claim 11, wherein the adhesive layer contains a drug having percutaneous absorption function.

Claim 20 (new): A roll type transdermal patch roll comprising;
a core; and

a tape type patch wound around the dispenser core, the tape type patch comprising a tape type support, an adhesive layer laminated on all over one side surface of the support, a covering layer laminated on one side of the adhesive layer which faces to the other side of the adhesive layer to which the tape type support contacts, through the adhesive layer,

Appl. No. 10/049,162
Amdt. dated December 16, 2003
Reply to Office Action of September 16, 2003

in a releasable manner from the adhesive layer, and a plurality of tear off cutting lines formed in the tape type support along a direction crossing a longitudinal direction of the tape type patch;

the tear off cutting lines being located positions which the adhesive layer exist in a direction perpendicular to the one side surface of the tape type support.

Claim 21 (new): The roll type transdermal patch according to claim 20, wherein each of the side covers is formed of polyacrylonitrile resin or polyethylene terephthalate resin, and

the dispenser core is formed of a resin selected from the group consisting of polyethylene terephthalate resin, polyacrylonitrile resin, high-density polyethylene resin and polypropylene resin.

Claim 22 (new): The roll type transdermal patch according to claim 20, wherein each of the side covers is formed from polyacrylonitrile resin, and the dispenser core is formed from polyethylene terephthalate resin or polyacrylonitrile resin.

Claim 23 (new): The roll type transdermal patch according to claim 20, wherein the covering layer is made of polyethylene terephthalate resin.

Claim 24 (new): The roll type transdermal patch according to claim 20, wherein the tape type support is a knitted fabric, woven fabric or non-woven fabric composed of stretchable polyethylene terephthalate resin or polybutylene terephthalate resin.

Claim 25 (new): The roll type transdermal patch according to claim 20, wherein the tear off cutting lines consist of perforation slits, with a slit width of 1.0 - 2.0 mm and a slit spacing of 1.0 - 1.5 mm, and the breaking strength when the tape type patch is torn off at the slits is 7.36 - 15.24 kgf/48 mm width.

Claim 26 (new): The roll type transdermal patch according to claim 20, wherein the adhesive layer contains a drug having percutaneous absorption function.
